

## WARSTEINER BRAUEREI HAUS CRAMER KG

---

**Dear Sirs,  
Dear Warsteiner Customers**

Legionella infections have appeared in the Warsteiner City area. In addition, on the 10th of September legionella was found in the waste water in the area of its discharge from the waste water pre-treatment plant of the Waldpark brewery in Warstein. This has obviously created a degree of unrest among some of our Warsteiner customers.

In the event that you are confronted with this in your markets or gastronomy operations, we would like to inform you as follows:

**Our products are safe: Drinking our products is completely harmless.** We can assure you that the raw products we use and the products we produce **do not contain legionella bacteria**. In addition we can guarantee the highest product safety and quality through the daily, comprehensive testing of our raw materials and products in the brewery's laboratories. The quality of our products is checked **daily** with **several thousand samples** in our laboratory and by external institutes.

Warstein the, 11.09.2013

Yours sincerely

WARSTEINER BRAUEREI  
Haus Cramer
